

March 2025

# Strategic Transformation

Building a Data First, Digital-Native Organisation

**alex.bank**

## Agenda

1. Overview
2. Data Governance
3. Data Driven
4. Digital Operations

**alex.bank**

# The Vision – a 100% Digital Bank

**Niche markets:** Targets underserved, markets in Consumer and Small Business lending

**Best-in-Class Technology / Distribution:** Leverages modern technology, a lean operating structure, and a diversified distribution strategy to scale efficiently

**Profitability Through Efficiency and Data-Driven Growth:** Prioritises attaining low-cost data driven digital operations, straight-through processing, and risk-based data-driven decision-making, achieving profitability through fair interest margins and sustainable growth

# Crawl, Walk, Run, Fly (Repeat)

*First principles, focus on getting the basics right, reduce the noise, automate for scale, fly by wire.*

## Get

Identify opportunities  
build minimal to get  
product in market to  
meet demand and  
provide customer with  
superior experience.

*get the basics right*

## Walk

Automate high value,  
low effort problems  
while Integrating  
solution to reduce the  
noise to focus on the  
work.

*reduce the noise, focus on  
the work*

## Run

Automate and enact  
digital operations.

*automate to scale*

## Fly

Add configurations and  
controls to enable fly  
enable wire /  
autonomous operations.

*fly by wire*

# Technology principles

A cloud-based technology strategy has enabled Alex Bank to build a robust infrastructure that allows it to offer customers faster and more efficient services, as well as access to the latest technological advancements.

## Straight Through

Straight through automated processing for customers from origination to service

## Digital Only

Everything is viewed through a digital lens and executed with modern agile mentality. Fully integrated digital experience

## Zero Trust

Authenticate and authorise based on available data points, including identity, location, device health, service, data classification, and anomalies

## Born in the Cloud

Architecture designed and developed specifically to take advantage of the many benefits and resiliency of cloud computing

## Automation

High levels of automation to enable scale and efficiency throughout the bank

## Data Driven

Data driven processes and decisioning aggregated from multiple sources enabling a highly automated digital bank

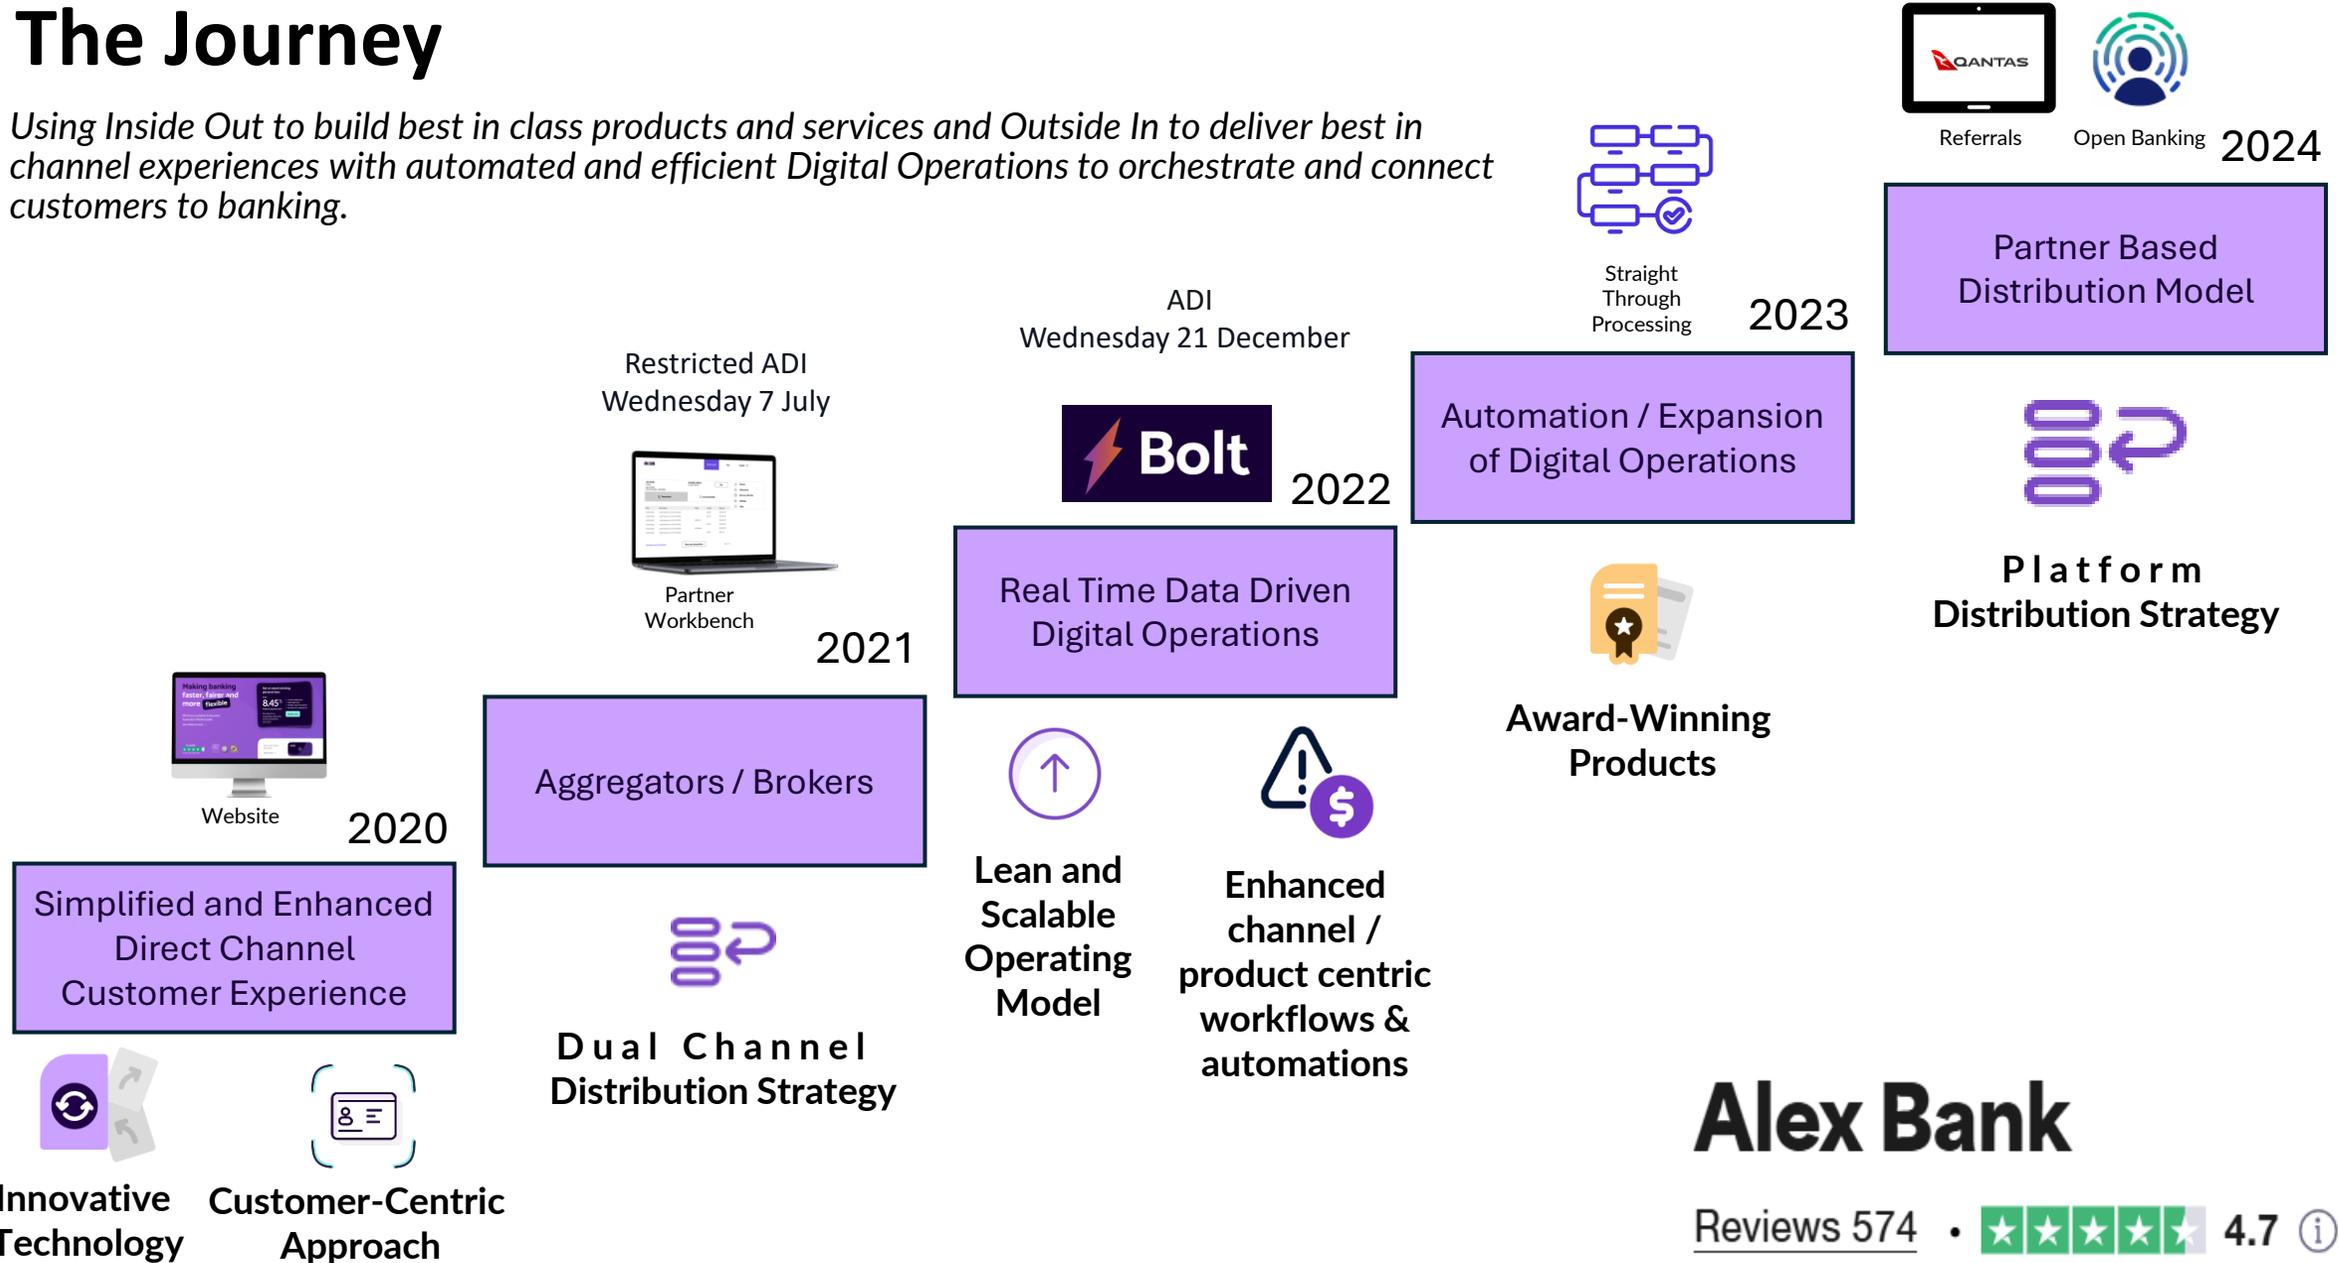

## Security

Robust security controls and application based multi-factor authentication to help protect assets, data and identity

# The Journey

Using Inside Out to build best in class products and services and Outside In to deliver best in channel experiences with automated and efficient Digital Operations to orchestrate and connect customers to banking.

# Data Governance

**alex.bank**

# Data Governance

*Prudential Standard and Guidance drives data governance framework*

- **confidentiality** refers to access being restricted only to those authorised;
- **integrity** refers to completeness, accuracy and freedom from unauthorised change or usage; and
- **availability** refers to accessibility and usability when required;
- **criticality** refers to the potential impact of a loss of availability;
- **sensitivity** means the potential impact of a loss of confidentiality or integrity.
- **information asset** means information and information technology, including software, hardware and data (both soft and hard copy);

**The Board** must ensure that the entity maintains information security in a manner commensurate with the size and extent of threats to its information assets, and which enables the continued sound operation of the entity.

An APRA-regulated entity **must** classify its information assets, including those managed by related parties and third parties, by **criticality** and **sensitivity**.

this **Prudential Standard** applies to all information assets managed by related parties and third parties, not only those captured under agreements with service providers of outsourced material business activities

identify and document the **processes** and resources needed to deliver **critical operations**, including **people, technology, information**, facilities and **service providers**, the interdependencies across them, and the associated risks, obligations, key data and controls;

# Data Governance

*Data Governance embedded into key procurement and security processes.*

sensitivity  
integrity

critical  
operations  
availability

Data Management and Governance is a matter of security, risk and critical operations and is managed through procurement, risk assessment and service provider onboarding process.

# Data Catalogue

Core data is identified at the enterprise level and mapped into Assets, Processes and Service Providers.

**Data Driven**

**alex.bank**

# Data driven definition

 A data-driven organization is one that relies on data to inform its decision-making processes, strategies, and operations. In such an organization, data is collected, analysed, and used systematically to drive business decisions, optimize performance, and gain insights into various aspects of the business, from customer behavior to operational efficiency.

 A digital operating model is a framework that integrates technology, data, processes, and agile practices to optimize an organization's operations, enhance customer experiences, and drive innovation in the digital age.

 A digital autonomous organisation uses advanced technologies like AI and automation to run its operations and make decisions with minimal human involvement.

 A data-driven organisation identifies the key data needed to operate and make decisions, invests in technology to autonomously operate and manage its processes through a series of asynchronous events, while relying on staff for oversight. It is event-driven rather than process-driven, using real-time data and events to initiate actions and decisions while leveraging automation for efficient operations.

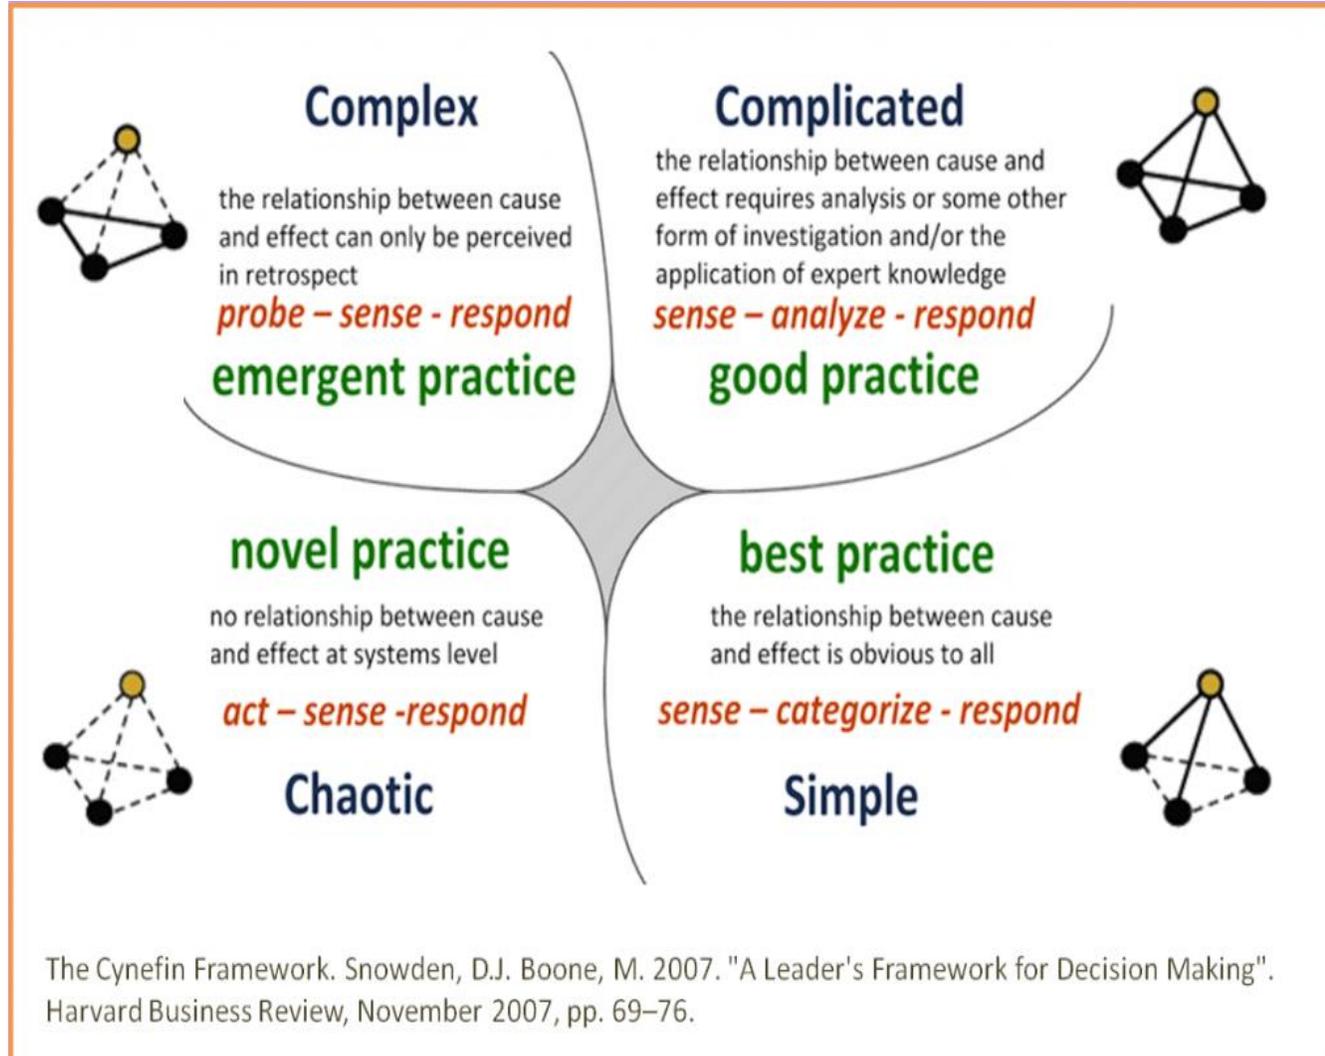

# Data driven challenges

*Different problems require different approaches.*

Digital Operations  
Event Based Services  
Schema Drift / Migration  
Security and Logging

Digital Adoption  
Customer Journeys

Autonomous Decision Making  
Workflows and Lifecycles  
Data Schemas

Process Automation  
Reporting and Analysis  
Data Services  
Oversight and Hindsight

Pronounced "kuh-nev-in"

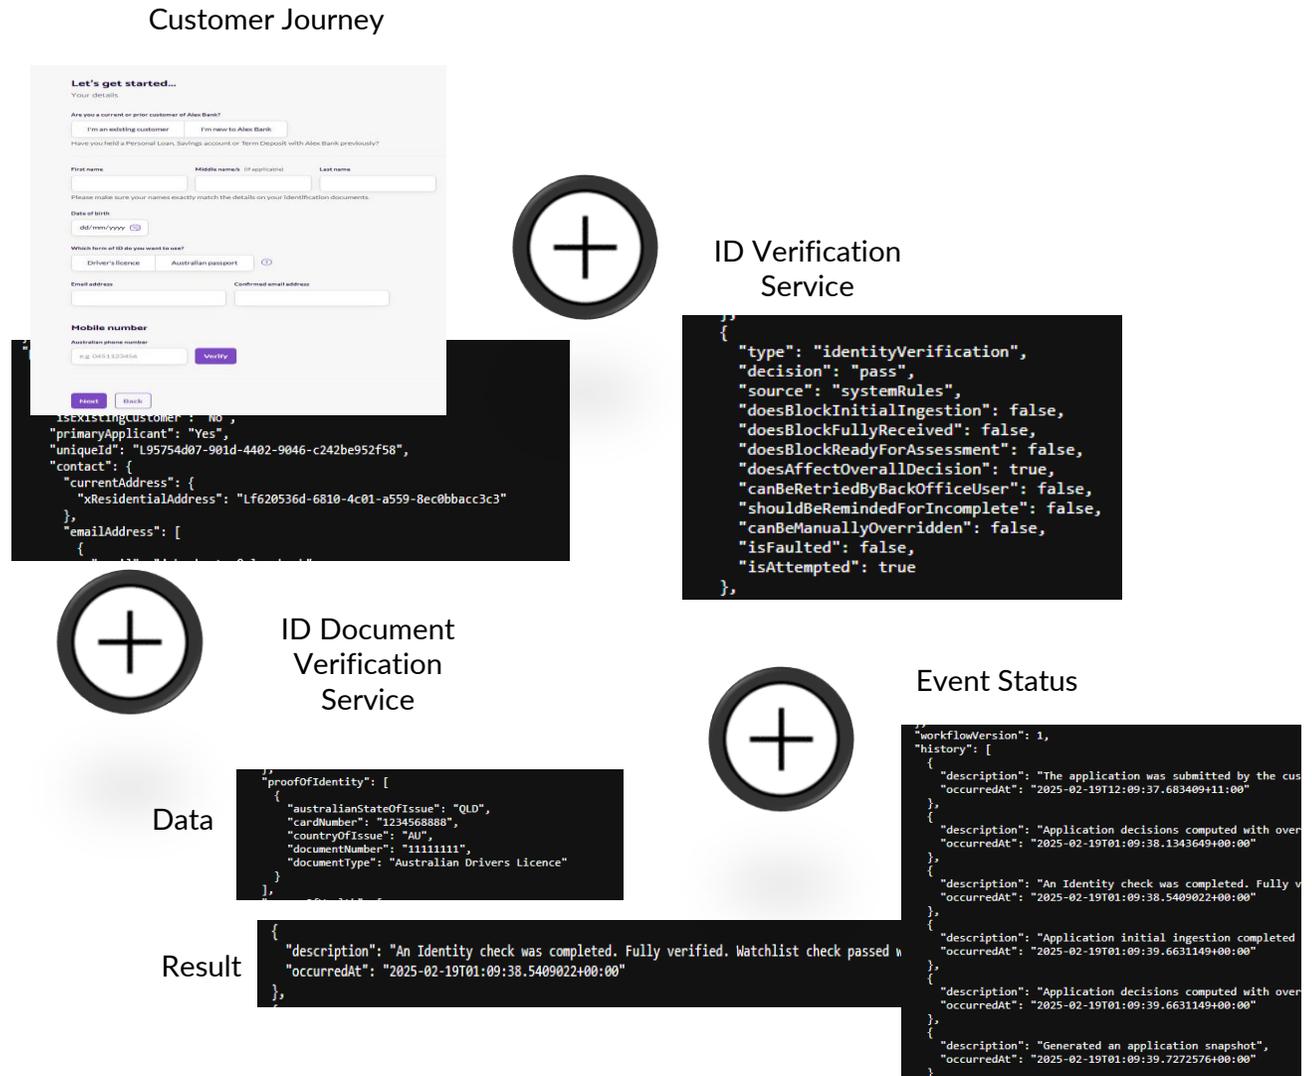

**Digital Operations**

**alex.bank**

# Data evolution / enrichment

Data progresses through multiple decentralised services supporting different functional processes

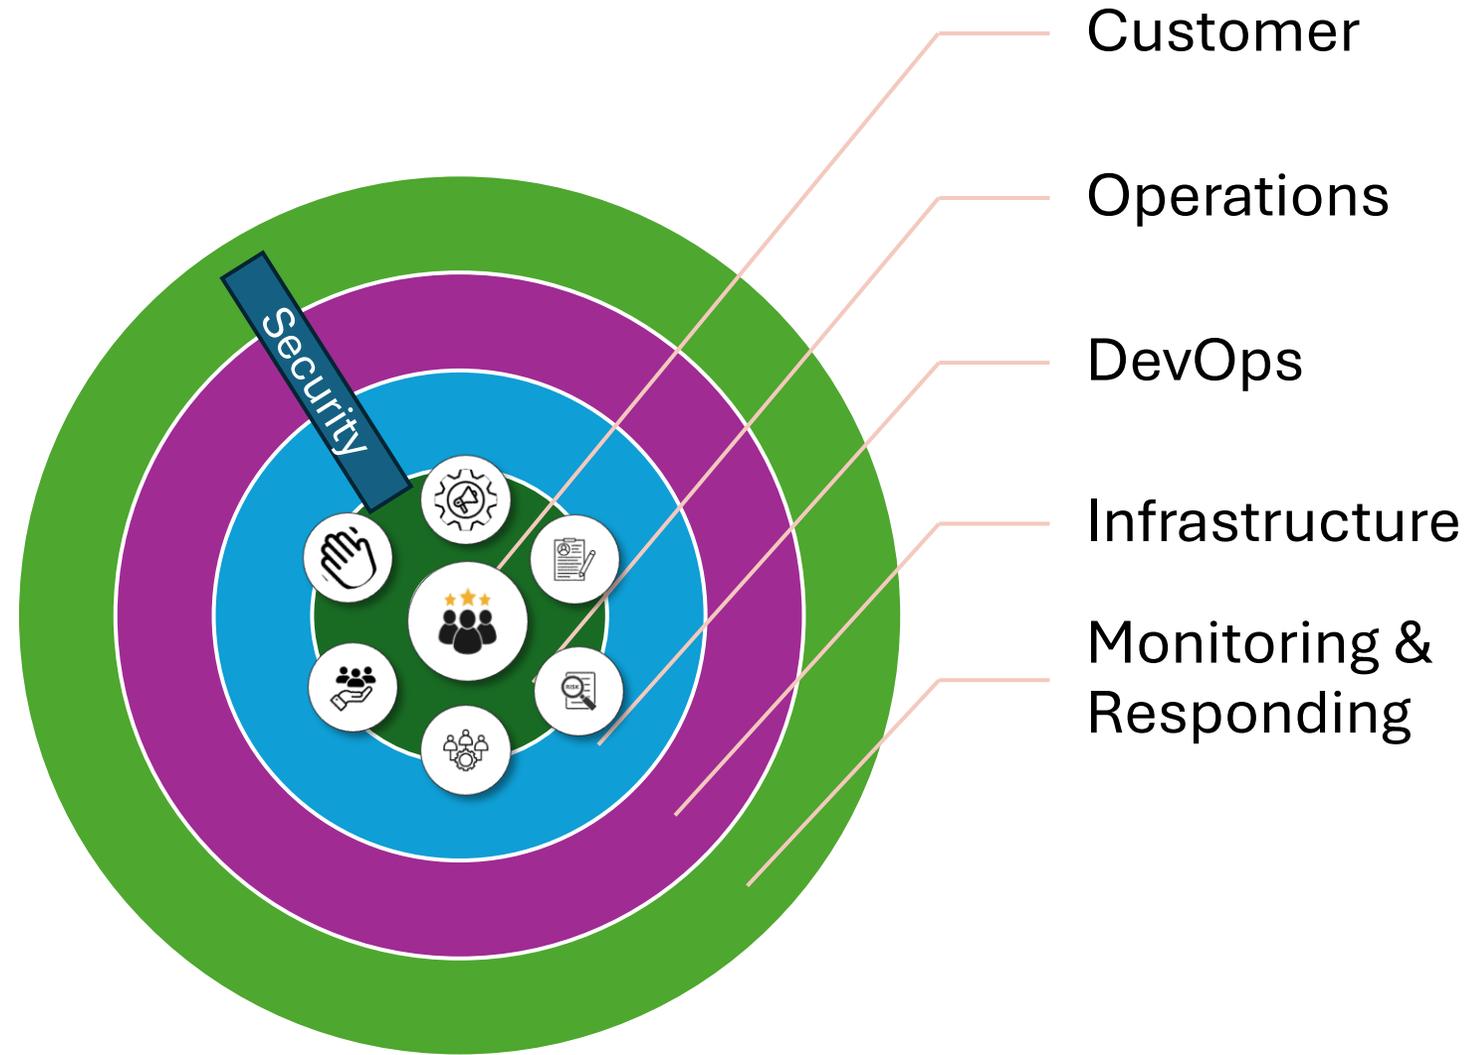

- Standards define the schema for the subject area.
- Schema evolution matches the complexity and maturity of the customer journey / product / service mix.
- Data evolves as it progresses through the different services and events.
- Quality is driven through the interface specification from the digital services.
- Consolidation of subject areas with service data and event results.
- Data is immutable and correlated as it occurs supporting tracing and tracking information from multiple services and events.

# Digital Operations

*Data driven goes beyond the customer journey*

- Digital transformation is not a destination.
- Change is constant
- Digital native means everything involves technology making Enhanced Cyber and Security Skills, Controls, Monitoring and Incident Management Essential.
- First principles / incremental approach
- Build vs Buy & Integrate continually changes as technology evolves and matures.
- Continued uplift of skills to ensure focus remains on value added activities / exception processing.
